PROFESSIONAL SUMMARY

Software Engineer with **4 years** of experience specializing in high-concurrency microservices and distributed backend systems in **Go (Golang)**, preceded by extensive mobile engineering foundations. Built and optimized production infrastructure at OSNOVA sustaining **1,500+ requests per second (RPS)** with sub-50ms p99 response times. Expertise in Redis Stack (Query Engine & in-memory secondary indexing), MongoDB Change Streams (Watchers), PostgreSQL query optimization, and Nginx reverse proxy tuning (upstream keepalive connection pooling and buffered logging). Fluent in English (B2).

TECHNICAL SKILLS

Languages:	Go (Golang), SQL, Dart, Python, Bash / Shell Scripting
Backend & Concurrency:	Clean Architecture, DDD, Worker Pools, Context & Cancellation, Goroutines, Channels, gRPC, Protobuf, REST APIs, WebSockets
Databases & Caching:	Redis Stack (Query Engine & Secondary Indexing), MongoDB (Change Streams / Watchers), PostgreSQL, Index Profiling, Transaction Management
Infrastructure & Ops:	Nginx (Upstream Keepalive Pooling, Buffer Logging), Docker, Docker Compose, RabbitMQ, Grafana, Linux System Administration, Git, CI/CD

PROFESSIONAL EXPERIENCE

Software Engineer (Backend & High-Load Infrastructure)
OSNOVA · EdTech & High-Concurrency Systems

Jan 2025 — Present
Tashkent, Uzbekistan

- Architected and optimized high-performance backend microservices in **Go (Golang)** capable of handling sustained workloads of **1,500+ RPS** with p99 response times below 45ms.
- Designed an innovative read-heavy data architecture using **Redis Stack Query Engine**: queries execute directly against in-memory indexed structures, reducing primary database read load by **70%**.
- Engineered an automated real-time synchronization engine via **MongoDB Change Streams (Watchers)** that listens to write, update, and delete events and reliably updates Redis Stack with <10ms replication delay.
- Optimized reverse proxy layer by implementing **Nginx upstream keepalive connection pooling**, reusing persistent TCP connections to backend Go instances, eliminating socket exhaustion and cutting connection overhead by **40%**.
- Configured **Nginx buffered access logging**, preventing disk I/O write starvation during peak traffic surges of 1,500+ RPS.
- Integrated **RabbitMQ** message queues for decoupling heavy background tasks (media transcoding, analytics ingestion), preventing request timeouts.

Software Engineer
Mom+ · Health & Family Platform

Aug 2024 — Dec 2024
Tashkent, Uzbekistan

- Collaborated on backend API contract design, payload compression, and client-server synchronization efficiency.
- Implemented request batching strategies and local response caching, reducing redundant network requests to backend services by 30%.

Software Engineer
Napa Team · Software Development

Feb 2024 — Jul 2024
Tashkent, Uzbekistan

- Engineered modular client-backend communication architectures and RESTful API endpoints for commercial client solutions.
- Designed strict input validation schemas, unified error handling middleware, and structured logging mechanisms.

Software Engineer
Modme · Educational CRM & ERP

Sep 2023 — Jan 2024
Tashkent, Uzbekistan

- Engineered high-concurrency **WebSocket** communication protocols for real-time messaging, attendance tracking, and live notifications.
- Designed offline-to-online data synchronization protocols with conflict resolution, ensuring data consistency across multiple client sessions.

Software Engineer (Remote)
NEO Insurance · FinTech / InsurTech

Mar 2023 — Aug 2023
Remote

- Built secure payment processing integrations (Click, Payme, Stripe) adhering to strict idempotency rules and transaction verification.
- Implemented secure API communication pipelines with HMAC request signing and encrypted local token management.

Software Engineer
IT Park / Tech Hub

Mar 2022 — Feb 2023
Tashkent, Uzbekistan

- Implemented RESTful endpoints, SQL database queries, and token-based authentication workflows.
- Constructed unit and integration testing suites, achieving 75%+ coverage on critical features.

EDUCATION & CREDENTIALS

Specialized Secondary / Computer Science Foundations
Tashkent, Uzbekistan
Focus: Distributed Systems, Concurrency & Backend Engineering

LANGUAGES

English: B2 — Upper Intermediate (Professional Working)
Uzbek: Native
Russian: Working Proficiency
